

Features and Benefits: *WeatherTRAK ET Pro² Smart Water Manager™*
and *WeatherTRAK Central™ Internet Management Option*

Key Benefits of Smart Water Manager

Property Managers and Developers

- Avoid the high costs and damages from overwatering
- Realize rapid return on investment

Municipalities

- Minimize water footprint
- Keep parks and median strip landscapes healthy
- Achieve affordable water management

Landscape Contractors

- Deliver proven water management solutions
- Reduce labor costs and boost efficiency
- Increase customer satisfaction and retention

WeatherTRAK Scheduling Engine™ Automates Accurate Irrigation

Featuring built-in WeatherTRAK Scheduling Engine software, *Smart Water Manager* automates irrigation schedules based on industry best practices.

- Programmable parameters for plant, soil and slope type optimize zones and water.
- Integrated flow management, leak detection and alerts.
- 12 to 48 station models with handheld remote interface option.

WeatherTRAK ET Everywhere Service™ Ensures Accurate Weather Updates

ET Everywhere Service delivers hi-resolution weather updates wirelessly each day, automatically adjusting irrigation based on data collected from 40,000 NOAA weather stations. Calculates and validates local weather data down to one square kilometer.

WeatherTRAK Smart Water Manager Delivers 'Round-the-clock Control

Manage single or multiple sites over a localized or large regional area with oversight, monitoring and reporting functions. 'Quick Links' provide instant access to reports, specific controllers or rain pause. Receive and respond to **alert notifications** via email or text message in real-time.

HydroPoint Customer Service Provides Customized Expertise

Our team of horticulture and irrigation experts ensures that you always enjoy peak performance from *Smart Water Manager*. Help from English and Spanish speakers is just a phone call or mouse click away.

Proven Smart Water Management. Unprecedented savings.

Twenty three independent studies and thousands of customers make it clear — *WeatherTRAK* is #1 for saving water, reducing runoff, protecting plant health and satisfying customers.

WeatherTRAK pays for itself through proven and sustained water and labor savings.

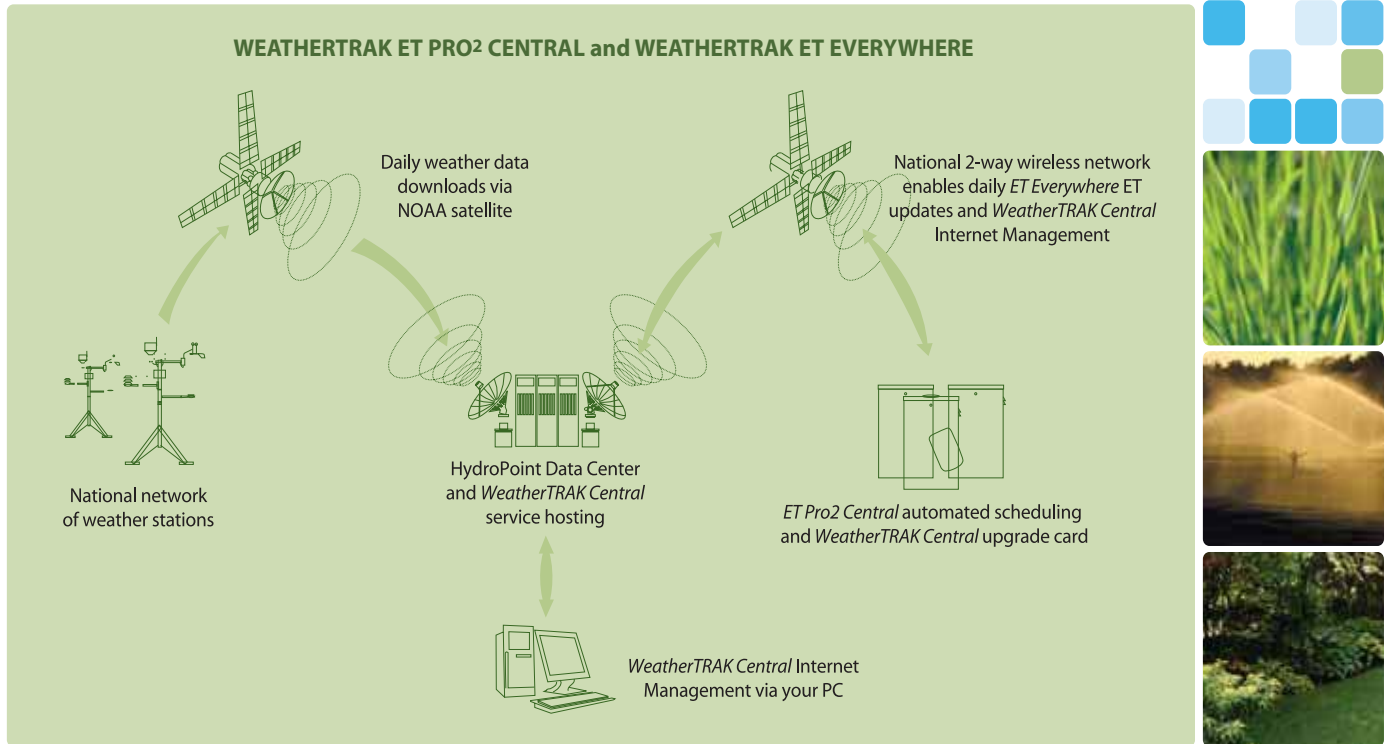

WeatherTRAK also guards companies against the risks of overwatering landscapes, including plant loss, slope erosion, hardscape damage, common area hazards, mold, mildew, non-point source pollution and customer complaints.

Put *WeatherTRAK Smart Water Manager* to work for you.

Cost-effective Water Management for Commercial Landscapes

Contractors asked, HydroPoint over-delivered with a solution that expands the feature set of any central-control product while reducing costs. Streamlined installation and maintenance accelerate project ROI by 30 percent.

Offering increased flexibility and customization, new hardware features and a smaller enclosure footprint, spanning 12 to 48 stations, make *WeatherTRAK Smart Water Manager* faster and easier to install for both retrofits and new construction. Features, such as a movable transformer, minimize additional field work and site modifications.

Smart Water Manager adjusts irrigation based on evapotranspiration (ET) data and the water needs of plants at each landscape station. Standard integrated flow management plus options like alert notifications, real-time diagnostics and handheld remote control interface resolve field issues by quickly pinpointing field wire integrity, hardware, flow or programming issues via the industry's most advanced, yet easy-to-use technology.

"I know every project will be a win-win for my client and my business, because with *WeatherTRAK Smart Water Manager* we get a reliable solution proven to deliver water and cost savings — all at the right price.

That's why *Smart Water Manager* is my trusted solution for any commercial site."

Steve Schinhofen
President
Harvest Landscape
